MEMORANDUM FOR: Deputy Director for Science and Technology

SUBJECT : National Reconnaissance Program Security
Directive No. 5 , Industrial Security

1. Attached is a proposed NRP Directive covering the security policy to be followed by Program Directors in their relationships with industrial contractors. In short, the Directive extends the [Redacted] Control System to industry and it will be used as a basis for security instructions sent to industry by the Program Officers.

25X1

2. The security staffs of OSA, OSP, and DD/S&T participated in the preparation of this Directive and we feel it is a good document that will help codify and standardize relationships with contracting firms.

3. There are two items that, at first blush, would seem to work a hardship on security officers assigned to the "I" Program:

a) One of the proposals specifies that security guides be prepared for each of the [Redacted] projects. I have discussed this with the Policy Branch of the Special Security Center and obtained agreement that there would be no need for appolicy guide for the "I" Program since it is already some 12 years old and the Russians have one of the vehicles.

25X1

b) The proposed Directive requires that full background investigations be made of all people having access to a [Redacted] industrial facility. In the fabrication of the "I" vehicle, all of the various craftsmen work in

one huge area, and to conduct full background investigations on all of them would be an unnecessary expense at the gain of a minimal amount of security. I have discussed this matter with the Policy Branch of the Special Security Center and have obtained agreement that in this case the [] Industrial Facility would be considered as only that portion of the contractor's premises where workers have access to sensitive information.

4. It is recommended that the Deputy Director for Science and Technology concur in the proposed Directive.
